Select all / Deselect all Completely updated and revised to reflect new filtering techniques and major updating of the instrumentation used to collect and analyze data Co-authored by scientists from academe and industry, both of whom have more than 30 years of experience in oceanographic research and field work Significant revision of sections covering spectral, wavelet, and harmonic analysis techniques Examples address typical data analysis problems yet provide the reader with formulaic “recipes” for working with their own data Significant expansion to 350 figures, illustrations, diagrams and photos Completely updated and revised to reflect new filtering techniques and major updating of the instrumentation used to collect and analyze data Co-authored by scientists from academe and industry, both of whom have more than 30 years of experience in oceanographic research and field work Significant revision of sections covering spectral, wavelet, and harmonic analysis techniques Examples address typical data analysis problems yet provide the reader with formulaic “recipes” for working with their own data Significant expansion to 350 figures, illustrations, diagrams and photos You currently don’t have access to this book, however you can purchase separate chapters directly from the table of contents or buy the full version.Purchase the book Customer Reviews, including Product Star Ratings help customers to learn more about the product and decide whether it is the right product for them. To calculate the overall star rating and percentage breakdown by star, we donâ€™t use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzed reviews to verify trustworthiness. Learn more how customers reviews work on Amazon This guide is designed to support the course, MNS 307, Introduction to Oceanography with Dr. Dong-Ha Min. The purpose of the guide is to help you navigate the various print and electronic resources. You will find information for: Selecting databases for finding articles Finding text-books Writing assistance Citing references Easy access to science news Official course description: Introduction to the sciences of oceanography: geological, physical, and biological. Two lecture hours and two laboratory hours a week for one semester. Course textbook. Investigating Oceanography, 3rd ed., by Sverdrup and Kudela (1260220621 / 9781260220629, c2020). Longhorn Texbook Access (LTA) program. More information about the LTA program is available at Longhorn Textook Access.
